<image:title>Before handing your iPhone over for repair, it is important to make sure your data is protected. While most repairs do not affect stored data, backing up your phone ensures nothing important is lost if something unexpected happens. Knowing what to back up before getting your iPhone repaired gives peace of mind and makes the repair process smoother. H2 What to Back Up Before Getting Your iPhone Repaired Even simple repairs can require the phone to be powered down or disconnected internally. While data loss is uncommon, a backup is always recommended. Photos and videos Photos and videos are often the most valuable data on a phone. Make sure your photo library is backed up to iCloud or transferred to a computer before any repair. Check that syncing has completed properly rather than assuming it has. Messages and chat history Text messages, WhatsApp chats, and other messaging apps may not always back up automatically. If conversations are important, confirm they are included in y</image:title>

<image:title>If your iPhone has been exposed to water – whether dropped in a sink, soaked in the rain or submerged entirely – the damage can range from mild to serious. But water damage doesn't always mean your phone is beyond repair. Here's what you need to know if your iPhone has taken a dip. What Happens When Water Gets Inside an iPhone Despite water resistance in newer models, liquid can still cause problems. Internal corrosion, short circuits and power failures are common after water exposure – especially if the device is turned on or charged while wet. Key signs of water damage include: Screen flickering or not turning on No sound or distorted audio Charging issues Overheating Touchscreen unresponsive Visible condensation under the screen What to Do Immediately After Water Exposure If your iPhone gets wet, follow these steps as soon as possible: Turn it off immediately (if it's still on) Do not charge it or press any

buttons Gently dry the exterior with a lint-free cloth

Avoid</image:title>
